

Author: Melissa Coates

Goals: I produce this diagram to share information about the permissions in the Power BI Service that are directly managed by self-service content creators and owners (and/or by decentralized teams). It excludes Power BI administrator-managed settings. My goal is to make you aware of the security aspects so you can investigate further if you see something unfamiliar. It's important to be aware of the breadth of permissions from administration, governance, auditing, security, and user training perspectives.

Got feedback or a suggestion?
